

Report on Top Borrowed Books

Introduction

This report presents an analysis of the most borrowed books within a library. The analysis includes the use of both bar and pie charts to provide a comprehensive understanding of borrowing patterns and preferences among library patrons. By visually representing the data, this report aims to shed light on the popularity of specific book titles and assist library management in making data-driven decisions.

Data Source

The data used for this analysis is sourced from the library's records, which contain information on book borrowings. The dataset includes book IDs and the corresponding number of times each book has been borrowed.

Overview

This report includes two types of charts: a bar chart and a pie chart.

Analysis and Insights

The insights gained from these charts can assist in optimizing the library's collection and understanding student preferences.

Conclusion

In conclusion, the analysis of top borrowed books using both bar and pie charts provides valuable insights into the library's borrowing patterns. It aids in identifying which books are in high demand and how each book contributes to the overall borrowing statistics. This data-driven approach enhances the library's ability to meet the needs of its patrons and make informed decisions regarding its collection management.
